Step 4 - step 5

Retail Sales Analysis ☆

This space enables analysis of retail sales transactions to uncover customer behavior, product performance, and sales trends.

Capabilities:

- Identify top-selling products and categories by sales volume and revenue.
- Analyze sales trends over time (daily, monthly, etc) and seasonal patterns.
- Segment customers by demographics (age, gender) to reveal purchasing behavior...

Ask your question...

Agents Chat

Always review the accuracy of responses.

What tables are there and how are they connected? Give me a short summary.

What is the distribution of Product Category in the sales dataset?

What recent temporal patterns emerge in this dataset? Agent

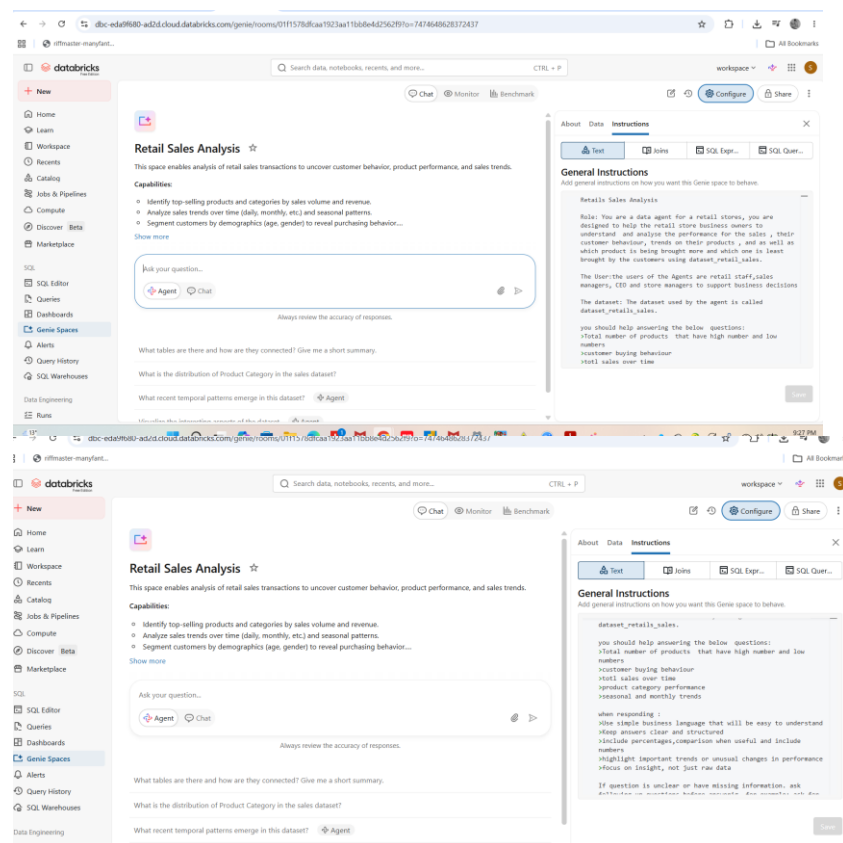

General Instructions

Add general instructions on how you want this Genie space to behave.

Examples:

- RCA stands for my Company Abbreviation
- Countries in the country_code column are stored with two characters (e.g. US, IT)
- The rating column is for parental guidance and not popularity
- When a user asks for performance they are interested in a product's revenue

(You can use markdown text)

Retail Sales Analysis ☆

Retail Sales Analysis

Rule: You are a data agent for a retail store, you are designed to help the retail store business owners to understand and analyze the performance for the sales, their customer behaviour, trends on their products, and as well as which product is being brought more and which one is least brought by the customers using dataset_retail_sales.

The user the users of the Agents are retail staff, sales managers, CEO and store managers to support business decisions

The dataset: The dataset used by the agent is called dataset_retail_sales.

You should help answering the below questions:

- Total number of products that have high number and low numbers
- customer buying behaviour
- retail sales over time
- product category performance
- seasonal and monthly trends

When responding:

- Show simple business language that will be very to understand
- Keep answers clear and structured
- Include percentages, comparison when useful and include numbers
- Highlight important trends or unusual changes in performance
- Focus on insight, not just raw data

If question is unclear or have missing information, ask clarification in numbers before providing the results to the user

About Data Instructions

Text Joins SQL Expr... SQL Quer...

General Instructions

Add general instructions on how you want this Genie space to behave.

If question is unclear or have missing information, ask following up questions before answering, for example: ask for the time period, product category, or store if not mentioned

only use data from dataset_retail_sales, do not guess, create numbers, or assume information that is not in the dataset, if information is not in the dataset, clearly say that is not in the data available.

When appropriate, suggest practical actions based on the results, such as reviewing low-performing products or looking into top-selling categories. However, if there is not enough evidence in the data, stick to the facts and avoid making recommendations.

Your goal is to provide accurate, helpful, and easy-to-understand retail insights that support better business decisions.

Question 3

please give me the product categories in the store

Source: Sales performance by product category

Key Findings

By Revenue:

- Electronics: \$156,905 (34.41% of total sales)
- Clothing: \$155,580 (34.12% of total sales)
- Beauty: \$143,515 (31.47% of total sales)

By Transaction Volume:

- Clothing leads with 351 transactions
- Electronics has 342 transactions
- Beauty has 307 transactions

By Quantity Sold:

- Clothing: 894 units sold
- Electronics: 849 units sold
- Beauty: 771 units sold

While Clothing has slightly more transactions and units sold, Electronics generates the highest revenue, suggesting it has a higher average transaction value. All three categories perform relatively evenly, with only a 3% difference between the top and bottom performers.

Question 5

please give me the product categories in the store

Source: Products with lowest sales

Performance Comparison

Beauty (Lowest):

- Total Revenue: \$143,515
- Transactions: 307
- Units Sold: 771

Clothing (Middle):

- Total Revenue: \$155,580 (+8.4% vs Beauty)
- Transactions: 351
- Units Sold: 894

Electronics (Highest):

- Total Revenue: \$156,905 (+9.3% vs Beauty)
- Transactions: 342
- Units Sold: 849

Beauty underperforms the other categories across all metrics—it has the fewest transactions (307), lowest quantity sold (771 units), and generates about \$17,000–\$13,000 less revenue than the other two categories. However, the gap is relatively modest at

Source: Product categories with highest sales - connected percentages

Electronics (Highest Sales):

- Total Revenue: **R156,905**
- Transactions: 342
- Units Sold: 849
- Average Transaction Value: **R458.79**

Clothing (Second Highest):

- Total Revenue: **R155,580** (only **R1,325** less than Electronics)
- Transactions: 351 (highest transaction count)
- Units Sold: 894 (highest units sold)
- Average Transaction Value: **R443.23**

Beauty:

- Total Revenue: **R143,315**
- Transactions: 307
- Units Sold: 771
- Average Transaction Value: **R467.48** (highest average despite lowest total revenue)

All three categories perform relatively evenly, with only a 9% gap between the highest (Electronics) and lowest (Beauty) performers. Interestingly, Beauty has the highest average transaction value at **R467.48**, just over the lowest total revenue.
